I have made UI also which I think will be easy to help you out in doing all the tasks assigned in the project.
Still the API are as follows-

localhost:3000/signUpPage

localhost:3000/loginPage

localhost:3000/user/details
/// GET req to display user details ///

localhost:3000/user/update
//GET req to update user details//

localhost:3000/imageUpload
//GET req to upload image of a product and saving the uploaded `IMAGE ADDRESS` to each product//

localhost:3000/productDetailsUpload
//GET req to add product details and saving to DB.//

localhost:3000/displayProduct/:id
//To display product on the basis of a unique id of each product

localhost:3000/displayProductOnTheBasisOfCategory/:category
//to display product on the basis of category

localhost:3000/listOfAllProducts
//to display all the product present in DB

localhost:3000/updatingProductById/:id
//updating a product on the basis of product id.

localhost:3000/deleteProductById/:id
// Deleting a product

localhost:3000/cart/:id
//to add product to the user cart

localhost:3000/user/cartProduct
//viewing cartProducts

localhost:3000/user/cartProduct/:productid
//deleting cart product

localhost:3000/passwordReset
//resetting user password

localhost:3000/logOut
